San Luis Obispo County Golf Courses

The San Luis Obispo County Director of Golf Operations has authorized the installation of the HYDROGEN ACTIVATION UNIT at all County golf courses.

SLO County manages the Morro Bay, Chalk Mountain, and Dairy Creek golf courses.

The County Golf Courses strive for Zero Waste efforts and are recognized by the Golf Course Superintendent's Association of America (GCSAA)!!

Josh Heptig is the Director of Golf Operations of San Luis Obispo County and the Acting Superintendent for Central California Golf Courses.

Mr. Heptig writes a blog at: <http://slocountygolfcourses.blogspot.com>
and can be contacted at: jheptig@co.slo.ca.us

Better Watering Technology

Agricultural Water usage is reduced by 50% with the HYDROGEN ACTIVATOR UNIT (HAU). The HAU is a must have tool for conservation efforts.

- Reduces water usage by as much as 50% due to more efficient moisture utilization and by lowering surface tension, which allows better absorption by plants.
- Reduces salt accumulation. Drives salt below the root zone.
- Reduces fertilizer usage because high soluble water equals more efficient distribution of nutrients.
- Helps increase the loam effect in soil and improves drainage, which conditions the soil and improves nutrition levels, thus improving product quality and yield.

BETTER WATER - RAIN WATER

Water is the building block of life. The important characteristics of water in this life sustaining attribute is its universal solvent property. Water in its virgin state, just about dissolves everything.

Our HAU technology enhances the depolarization of Hydrogen which induces a carbonate effect upon colloids of dissolved minerals in water.

HAU Conditioned Water is simply "better" water mimicking rain water.
